Q: htaccess - How to change pages.php?p=MEMET? I have this code in htaccess RewriteEngine On RewriteBase / RewriteCond %{REQUEST\_FILENAME}!-f RewriteCond %{REQUEST\_FILENAME}!-d RewriteRule ^(.+)\$ pages.php?p=\$1 [QSA,NC,L] All works fine. But now I have to change the "?p=" part with the same number as MEMET, how can I do that? How should it be? A: Just move this rule to your external htaccess: RewriteCond %{THE\_REQUEST} ^[A-Z]{3,}/s/+pages\.php\?p=([^\s&]+) [NC] RewriteRule ^ pages.php?p=%1 [QSA,L,NE]

Q: MySQL query takes too long if variables are replaced by variable names For my MySQL query I use variables. If I try to replace the variables by the actual values for these variables, the query takes a long time (between 5-10 minutes instead of just a few seconds). I guess the variables are replaced by their values and only then passed to the query? I am asking that question because I thought this would be a good practice to make a query a bit more short and faster. Can you advise me how I can improve my query and still be able to replace 2d92ce491b
