**結露の怖さ**

家の寿命は断熱材にかかっている!  
**断熱材は住宅の命です!**

日本の家が  
20~30年しか持たない理由  
それは内断熱による  
壁内結露が原因です

**結露は「家の病気」です**

どんなに優れた構造・厳選素材を採用しても、  
結露を起こす家では意味がなく、長持ちもしません!

グラスウールなどの内断熱材は、薄いポリエチレンフィルムで覆われているため、簡単に言えば家はビニールハウスようになります。それに加えて、一緒に施工する薄い気密シートは壁の上下や端部など複雑な形状の貼付が難しい上に、釘や金物に弱く修繕・改築などで壁に穴を開けた際に、そこを塞ぐことが困難になります。そして、夏場の冷房によって通気孔から侵入した高温多湿の空気が断熱層（壁内）で結露を起こし、汚れやカビの原因となりその後大切な構造体にも悪影響を及ぼすのです。

結露が原因で躯体まで腐朽してしまった家

It is highly customizable and can be adapted to simulate different traffic situations. It can be used in education and training as well as in research. Implementation Currently the simulator relies on Python 3, Qt 5, and PyQt5 for its user interface and the 3D engine it uses. It has been tested on Linux and Windows. The simulator uses the Sim-Telecom (part of the FlightGear simulator) routing engine for air traffic control. The backend handles all computations needed for aircraft and controllers. Download A Live version of the ATC simulator is freely available in a pre-compiled Ubuntu package.
