Add the driver. Plug the card back in and restart the computer. You should have the driver installed. The present invention relates to a method of manufacturing a semiconductor device, and particularly to a technique effectively applicable to a semiconductor device having an impurity region formed by ion implantation using a resist mask. In recent years, as a semiconductor integrated circuit becomes more integrated and becomes highly miniaturized, a demand for miniaturization of a pattern forming process is growing and the problem of short-channel effect due to miniaturization of a gate electrode has come to the fore. For example, there is a problem of gate depletion caused by reduction of a gate length and there is also a problem of punch-through, which is a phenomenon where a current passes through a semiconductor substrate below a gate electrode, caused by gate depletion. In view of such circumstances, a transistor having a double-gate structure has been developed and, in particular, attention has been paid to a FINFET (Fin-shaped Field Effect Transistor) having a channel region formed by a thin silicon film disposed on a sidewall of a silicon fin (see, for example, Japanese Unexamined Patent Publication No. 2007-260571). In the technique described in Japanese Unexamined Patent Publication No. 2007-260571, since a thin silicon film is
