abstract: 'We investigate the impact of various Higgs couplings to quarks on the constraints that Higgs production and decay measurements at the LHC have on the mass of the Standard Model-like Higgs boson. In particular, we analyze the impact of the $H^{\pm}W^{\pm}$ coupling for a Higgs boson with an arbitrary mixing with the Standard Model-like Higgs boson, as well as the effect of a sizable coupling to right-handed bottom quarks on the reconstruction of the H^{\pm} mass at the LHC. We also discuss a novel measurement of the ratio of the bottom and top Yukawa couplings from the observed Higgs production rate at the LHC. We find that the LHC can probe Higgs couplings as small as -0.2 to 0.1 for the allowed range of $M_{H^{\pm}}$.' author: - Zoltan Ligeti - Matthew Wald title: 'The Higgs Couplings of the MSSM at the LHC' --- [u1]{} Y.
